

The Department of Computer Science

Zhe (Sunny) Sun

"I am a masters student in the Computer Science Department. I am currently working on my thesis with my supervisor, Dr Manoharan. My research is about online game infrastructure. I investigate PC-online, cellphone-online, TV-online, massive multi Jeremy player-online and browser games. I am mainly focused on analyzing and classifying games and recipes for building online game servers and on the development of online games. I am such a lucky man - I can work with my passion everyday!

I came to New Zealand as an international student in 2002 and started my study in Computer Science Department of The University of Auckland. During my time there, I managed to get all the good things in life - two qualifications i.e. a Graduate Diploma and Postgraduate Diploma, permanent residency in New Zealand, a satisfying job and even my pretty wife who used to be my classmate at university.

After over four years of working full-time in the IT field, I felt that I needed to update my knowledge to meet the challenges of the current climate. When I returned to the Department of Computer Science in 2008, I was deeply impressed by the fresh look of the department and the achievements they had made. I believe that once I obtain my masters degree I will become more confident and skilled for my future career."
