

# BTech 451 Introductory Seminar

Dian LIN

# Code Runner Extension

- Plugin of Moodle
- One of the assignment parts at Auckland Uni.
- Immediately gives feedbacks to students
- However, weakness existed----Not able to detect cheating.

# Project Goals

- Learn different ways of cheating (well.. Not gonna use it)
- Most important: Push up barriers against cheating

# Rationale of the Project

- Doing research to see the cheating ways in order of increased popular.
- Making implementation into Code Runner (Programming) as barriers to against cheating

# Achievement at the End

- Reduce the probability of cheating at Code Runner so that less students try unfair way to pass the assignments
- Encourage individual workings at Code Runner

Thank You
