COMPSCI 111/111G - Lecture 23

1

## Text Styles

**\textbf{ Argument will be bold }**

*\textit{ Argument will be italic }*

*\textsl{ Argument will be slanted }*

**\textsf{ Argument will be sans-serif }**

**\textrm{ Argument will be serif (roman) }**

**\texttt{ Argument will be monospace }**

**\textsc{ ARGUMENT WILL BE SMALL CAPITALS }**

## Revision

### LaTeX is a document preparation system

- Typesets documents

### Commands

- Start with a backslash (\)

### Environments

- \begin{name}
- \end{name}

```
\documentclass[a4paper]{book}  
\begin{document}  
...  
\end{document}
```

2

21/09/2006

COMPSCI 111/111G - Lecture 23

## Font Style

### Forms

- Declarative form (Set style from this point forward)
  - Environmental form (Create an environment that uses this style)
- 
- |             |                               |
|-------------|-------------------------------|
| • \bfseries | Bold                          |
| • \mdseries | Normal weight (i.e. not bold) |
| • \itshape  | Italic                        |
| • \slshape  | Slanted                       |
| • \upshape  | Upright (opposite of slanted) |
| • \scshape  | Small Capitals                |
| • \rmfamily | Serif (roman)                 |
| • \sffamily | Sans-serif                    |
| • \ttfamily | Monospace (typewriter)        |

COMPSCI 111/111G - Lecture 23

3

21/09/2006

COMPSCI 111/111G - Lecture 23

4

## Example

---

```
%Normal way to set italics  
\textit{This text will be italic}  
  
%Environment form  
\begin{itshape}  
This text is also italic  
\end{itshape}  
  
%Declarative form  
\itshape  
All text from this point forward will be italic
```

21/09/2006

COMPSCI 111/111G - Lecture 23

5

## Exercises

---

Using the normal forms for setting font styles, what commands would you use to make the text "Hello" appear sans-serif, bold and italic.

Using the declarative forms for setting font styles, what commands would you use to make the text "Hello" appear sans-serif, bold and italic.

Using the environment forms for setting font styles, what commands would you use to make the text "Hello" appear sans-serif, bold and italic.

21/09/2006

COMPSCI 111/111G - Lecture 23

6

## Font Size

---

### New way to apply a command

- Set the scope of the command
- Command only applies within the curly braces
- Note: this works with the declarative forms for font style too

### Format:

```
{\command ... text goes here ... }
```

```
\tiny      \scriptsize      \footnotesize  
\small    \normalsize     \large  
\Large    \LARGE          \huge  
\Huge
```

21/09/2006

COMPSCI 111/111G - Lecture 23

7

## Example

---

```
{\small This text is small}  
  
\Large\itshape This text is large and italic}  
  
{  
\tiny  
\textit{This text will be tiny and italic}  
  
This text will be tiny, but not italic.  
}
```

21/09/2006

COMPSCI 111/111G - Lecture 23

8

# Aligning paragraphs

## flushleft

- Environment that aligns a paragraph to the left

## flushright

- Environment that aligns a paragraph to the right

## center

- Environment that aligns a paragraph to the centre

```
\begin{center}
furuike ya\\
kawazu tobikomu\\
mizu no oto
\end{center}
```

```
\begin{center}
Three things are certain:\\
Death, taxes, and lost data.\\
Guess which has occurred!
\end{center}
```

# Unordered Lists

## Unordered Lists

- List that uses bullet points
- `itemize` environment
- `\item` used to identify each item in the list

```
\begin{itemize}
\item Pears
\item Apples
\item Bananas
\end{itemize}
```

# Ordered Lists

## Ordered Lists

- List that is enumerated
- `enumerate` environment
- `\item` used to identify each item in the list

```
\begin{enumerate}
\item Pears
\item Apples
\item Bananas
\end{enumerate}
```

## Description Lists

- List that is used to define terms
- `description` environment
- `\item[ term ]` used to identify each term in the list

```
\begin{description}
\item[Pears] Fruit
\item[Apples] More fruit
\item[Bananas] Still more fruit
\end{description}
```

# Quotes and Quotations

## quote environment

- Used for short quotes
- Entire environment is indented
- The first line of a new paragraph inside `quote` is not indented.

## quotation environment

- Used for longer quotes
- Entire environment is indented
- The first line of a new paragraph inside `quotation` is indented

```
\begin{quote}
They misunderestimated me.

Our nation must come together to unite

After all, Europe is America's closest ally
\end{quote}
```

21/09/2006

COMPSCI 111/111G - Lecture 23

13

# Mathematics

## Three ways to enter mathematics mode

### Inline text

- `$ ... $`

### displaymath environment

- Centres the maths on a line of its own

### equation environment

- Centres the maths on a line of its own
- Numbers the maths with an equation number

# Verbatim

## verbatim environment

- Reproduces text exactly as it appears
- Uses a monospace font (courier)
- Often used for computer code
- No latex commands can be used in `verbatim`

```
The following commands are used in LaTeX
\begin{verbatim}
Use \\ to create a line break. Use
\section{ name } to create a new section.
\end{verbatim}
```

The following commands are used in LaTeX  
Use `\\\` to create a line break. Use  
`\section{ name }` to create a new section.

COMPSCI 111/111G - Lecture 23

14

# Examples

The equation `$x = y$`  
is a simple equation.

The equation `x = y` is a  
simple equation.

The equation:  
`\begin{displaymath}`  
`x = y`  
`\end{displaymath}`  
is a simple equation.

The equation:  
 $x = y$   
is a simple equation.

The equation:  
`\begin{equation}`  
`x = y`  
`\end{equation}`  
is a simple equation.

The equation:  
 $x = y \quad (1.1)$   
is a simple equation.

21/09/2006

15

21/09/2006

COMPSCI 111/111G - Lecture 23

16

# Laying out mathematics

## Too many commands to memorise

- Look up the commands when we need them
- Any symbol, any structure exists somewhere
- We will look at the most common commands
- To apply letters to a group, we put curly braces around them

## Exponent

- Carat (^)
- Example:  $n^{\{th\}}$    $n^{\text{th}}$

## Subscripts

- Underscore (\_)
- Example:  $s_0$    $s_0$

21/09/2006

COMPSCI 111/111G - Lecture 23

17

# Other common functions

## Square roots

- $\sqrt{\dots}$
- Example:  $\sqrt{x^2 + y^2}$    $\sqrt{x^2 + y^2}$

## Fractions

- $\frac{\text{numerator}}{\text{denominator}}$
- Example:  $3\frac{1}{2}$    $3\frac{1}{2}$

## Sum

- $\sum$
- Example:  $\sum_{k=1}^n k$    $\sum_{k=1}^n k$

21/09/2006

COMPSCI 111/111G - Lecture 23

18

## Example

```
\sum_{k=1}^n k = \frac{1}{2}n(n+1) = \frac{n(n+1)}{2}
```

$$\sum_{k=1}^n k = \frac{1}{2}n(n+1) = \frac{n(n+1)}{2}$$

21/09/2006

COMPSCI 111/111G - Lecture 23

19

## Example

If a quadratic equation is given by:

```
\begin{displaymath}
f(x) = ax^2 + bx + c
\end{displaymath}
```

Then the formula for calculating the roots of a quadratic equation is:

```
\begin{displaymath}
x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}
\end{displaymath}
```

If a quadratic equation is given by:

$$f(x) = ax^2 + bx + c$$

Then the formula for calculating the roots of a quadratic equation is:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

21/09/2006

COMPSCI 111/111G - Lecture 23

20

# Exercise

Write the code that reproduces the following LaTeX:

The sum of a geometric series is:

$$\sum_{k=0}^n ar^k = ar^0 + ar^1 + ar^2 + ar^3 + \dots + ar^n$$

We can rearrange the equation to produce the simple formula:

$$\sum_{k=0}^n ar^k = \frac{a(1 - r^{n+1})}{1 - r}$$

# Adding functionality

\usepackage{ packagename }

- A library that adds or modifies the commands available
- Thousands of packages available
- Some are very useful

Add the \usepackage command to the preamble

```
\documentclass[a4paper]{article}
\usepackage{graphicx}

\begin{document}
...
\end{document}
```

## graphicx

Package that allows you to import graphics

- Graphics must be in .eps format
- Can set width and height
- Other options are also available

\includegraphics[options]{Filename.eps}

```
\documentclass[a4paper]{article}
\usepackage{graphicx}

\begin{document}
This is a simple picture

\begin{center}
\includegraphics[width=10cm]{Example.eps}
\end{center}

\end{document}
```

## Summary

LaTeX is a very good typesetting package

- Excellent for mathematics
- Excellent for long documents
- Excellent for people who really care about presentation
- Very configurable
- Steep learning curve (but worth it for those that bother)

Recommended software for use on Windows

- MikTeX (LaTeX distribution)
- TeXnicCenter (An IDE for using LaTeX easily)
