Collision testing

Classes for game objects

- You should think of defining a class for each distinct type of game object
- Using suitable classes will **simplify** the JPanel class

```
public class MyJPanel extends JPanel implements KeyListener {
    private Point pos;
    private int size;

    public MyJPanel() {
        pos = new Point(50, 50);
        size = 75;
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;
        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}
```

```
public class MyJPanel extends JPanel implements KeyListener {
    private Point pos;
    private int size;

    public MyJPanel() {
        pos = new Point(50, 50);
        size = 75;
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;
        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}
```

```
public class GameObject {
    private Point pos;
    private int size;
}
```

```
public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        pos = new Point(50, 50);
        size = 75;
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;
        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}
```

```
public class GameObject {
    private Point pos;
    private int size;
}
```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        pos = new Point(50, 50);
        size = 75;
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }
}

```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        go = new GameObject(50, 50, 75);
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }
}

```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        go = new GameObject(50, 50, 75);
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        pos.x += size;
        pos.y += size;

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }

    public void move() {
        pos.x += size;
        pos.y += size;
    }
}

```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        go = new GameObject(50, 50, 75);
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        go.move();

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }

    public void move() {
        pos.x += size;
        pos.y += size;
    }
}

```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        go = new GameObject(50, 50, 75);
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        go.move();

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }

    public void move() {
        pos.x += size;
        pos.y += size;
    }

    public void draw(Graphics g) {
        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

```

```

public class MyJPanel extends JPanel implements KeyListener {
    private GameObject go;

    public MyJPanel() {
        go = new GameObject(50, 50, 75);
        addKeyListener(this);
    }

    public void keyPressed(KeyEvent e) {
        go.move();

        repaint();
    }

    public void paintComponent(Graphics g) {
        super.paintComponent(g);

        go.draw(g);
    }
}

public class GameObject {
    private Point pos;
    private int size;

    public GameObject(int x, int y, int s) {
        pos = new Point(x, y);
        size = s;
    }

    public void move() {
        pos.x += size;
        pos.y += size;
    }

    public void draw(Graphics g) {
        g.setColor(Color.red);
        g.fillOval(pos.x, pos.y, size, size);
        g.setColor(Color.black);
        g.drawOval(pos.x, pos.y, size, size);
    }
}

```
