
 **CompSci.367**
The Practice of Artificial Intelligence

Assoc. Prof. Ian Watson

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **A Short History of AI**

- The origins of Artificial Intelligence
- General Purpose Problem Solvers
- Expert Systems - a solution ?
- The early years
- The hype
- The AI Winter
- The AI Spring

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **Science Fiction**

- we are all familiar with the concept of intelligent machines: *2001*, *Bladerunner*, *the Terminator*, *Star Trek*

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Science Fiction

- Movies you should see this semester:

- *2001*
www.youtube.com/watch?v=JcNkMIwolKc
- *Blade Runner*
www.youtube.com/watch?v=J_hYstjBy8Y
- *the Terminator*
www.youtube.com/watch?v=LLHik9TjJkA
- *A.I.*
www.youtube.com/watch?v=7xeeteKWb6U
- *Dark Star*
www.youtube.com/watch?v=qJGRySVyTDk

The Origins of AI

- In the 1830s - 40s Charles Babbage an English inventor and mathematician designed an "engine" for automating calculation
- His *Difference Engine* was never built in his life time

Babbage's Difference Engine No.2

www.youtube.com/watch?v=0anlyVGeWOI

The Origins of AI

- After the Difference Engine Babbage designed the *Analytical Engine*
- This could be programmed by punch cards to solve "any" mathematical problem
- The Analytical Engine has the same theoretical architecture as a modern digital computer
 - I/O devices, program store, CPU & working memory
- www.youtube.com/watch?v=GJiyGvoYd5E

 The University of Auckland

The Origins of AI

- Lady Ada Lovelace hypothesised in 1842 that Charles Babbage's Analytical Engine could manipulate symbols other than numbers and hence perhaps could compose music or poems
- The programming language ADA is named after her

http://en.wikipedia.org/wiki/Ada_lovelace

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The Frankenstein myth

- An enduring myth
- Brought to life by Mary Shelly in her gothic novella *Frankenstein*
- echoed in 2001, Terminator, etc....
- Interesting relationship to the origins of computing & AI

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The Frankenstein myth

- Mary Shelley was married to Percy Shelly
- Best friend of Lord George Byron
- Ada Countess of Lovelace was Byron's daughter
- Ada worked with Charles Babbage
- and hypothesized about AI

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The Frankenstein myth

- Ada must have read Frankenstein
- The idea of creating a conscious entity that may turn upon us was already in popular culture around 150 years ago
- At the birth of computing & AI

www.sdsc.edu/ScienceWomen/lovelace.html

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The Origins of AI

- Alan Turing showed that a very simple computer (a Turing machine) could solve any problem that could be described by symbols
- In the 1930's he is the person first credited with proposing that a computer could exhibit "intelligence"
- During WW-2 he worked cracking German codes
- He worked on the development of the 1st computer that could store a program at Manchester University
- Turing committed suicide in the 50's

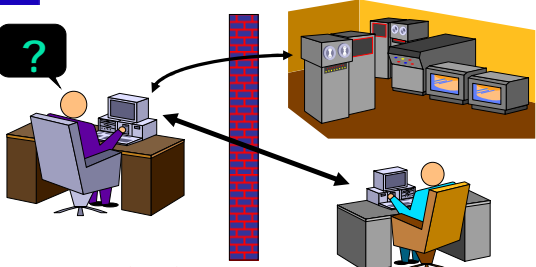

www.alanturing.net/

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The Turing Test

Can you decide which answers come from the person and which from the computer?

www.loebner.net/Prizef/loebner-prize.html

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

The Turing Test

- Note: this measure of intelligence does not assume
 - consciousness or feelings
 - emotions or any of the other characteristics of people
- AI programs “mimic” intelligence
- we leave the arguments as to the nature of intelligence to philosophers
- however, the metaphor of the brain as a computer has become dominant

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Artificial Intelligence

- AI can be defined as an attempt to emulate the behaviour of people by a computer
- AI was invented at Dartmouth University in the 1950s
- areas of research include:
 - vision & natural language understanding
 - speech recognition, robotics
 - knowledge-based systems
 - machine learning, artificial life & neural nets

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

AI vs. conventional programs

- conventional applications process data deterministically
 - they give a definite solution to definite inputs
 - $2 + 2 = 4$ always, every time and for ever!!!
- AI systems are frequently non-deterministic
- they can handle uncertainty, incompleteness, and dynamic environments
 - an expensive meal costs ????
 - this is hard to answer – it's context sensitive

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Symbol Systems

- AI programs reduce problems to symbols
- these symbols can be manipulated
- the manipulation of these symbols can seem intelligent
- the computer does not "know" what the symbols mean

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Representing Problems as Symbols

A farmer has a problem, he has to cross a river by boat taking with him his dog, goose and a sack of corn. The boat is small and can only hold one item with the farmer.

He can't leave the dog alone with the goose - the dog will eat the goose. He can't leave the goose alone with the corn - the goose will eat the corn.

What is the order in which the farmer transfers his property across the river?

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

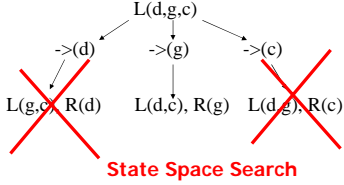

A Symbolic Representation

- Dog = d
 - Goose = g
 - Corn = c
- symbols
- At the start of the problem all are on the left back of the river = $L(d,g,c)$
 - The right bank is empty = $R()$
 - row dog to right bank = $->(d)$
 - row corn to left bank = $<-(c)$
- states
- operators

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **A Symbolic Representation**

- Starting State = $L(d,g,c), R()$
- Goal State = $L(), R(d,g,c)$

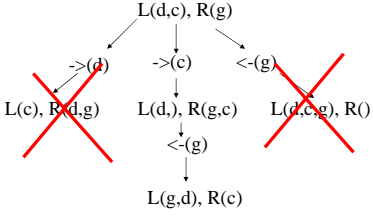

State Space Search

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **A Symbolic Representation**

- Starting State = $L(d,c), R(g)$
- Goal State = $L(), R(d,g,c)$

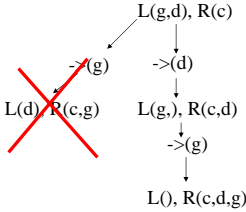

State Space Search

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **A Symbolic Representation**

- Starting State = $L(g,d), R(c)$
- Goal State = $L(), R(d,g,c)$

State Space Search

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **A Symbolic Representation**

- Starting State = $L(g,d,c), R()$
- Goal State = $L(), R(d,g,c)$
- $\rightarrow(g), \rightarrow(c), \leftarrow(g), \rightarrow(d), \rightarrow(g)$

- Many AI programs use State Space Search
- This will be covered in detail later

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **General Purpose Problem Solver (GPS)**

- in 1963 Newell and Simon attempted to build a program that could solve problems like people
- the program did not contain knowledge about the world
- instead it attempted to generalise problem solving methods

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **Generate and Test**

- This is an example of a problem solving technique often used in diagnosis**

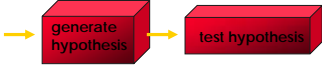

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

Generate and Test

- This is an example of a problem solving technique often used in diagnosis

```

graph LR
    A[generate hypothesis] --> B[test hypothesis]
  
```

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

Generate and Test

- This is an example of a problem solving technique often used in diagnosis

```

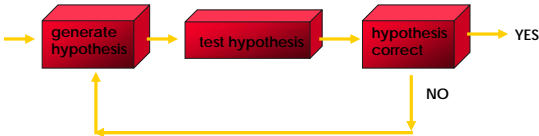

graph LR
    A[generate hypothesis] --> B[test hypothesis]
    B --> C[hypothesis correct]
    C --> D[YES]
  
```

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

Generate and Test

- This is an example of a problem solving technique often used in diagnosis

```

graph LR
    A[generate hypothesis] --> B[test hypothesis]
    B --> C[hypothesis correct]
    C -- YES --> D[YES]
    C -- NO --> A
  
```

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

GPS

- GPS was moderately successful
- it could solve logical expressions
- and mathematical theorems
- To 1st year undergraduate level
- but not "*real world*" problems

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Expert Systems

- It was realised that to solve problems you need knowledge about the problem area
 - Doctors need medical knowledge
- the knowledge must be stored as symbols that a program can manipulate to solve problems
- perhaps using problem solving methods such as generate and test

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Expert Systems

- in the mid 70's several pioneering ES were built in the US
 - MYCIN - diagnosed infectious diseases of the blood
 - DENDRAL - analysed mass spectroscopy results
 - PROSPECTOR - analysed geological survey data to find mineral deposits
 - R1 - configured DEC VAX computers

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

Expert Systems

- Expert System = Knowledge-Based System
- systems that embody expert knowledge in such a form that they can offer seemingly intelligent advice or decisions
- Require expert knowledge
- Need knowledge engineering
- This is dealt with later

Expert Systems

- communicate with users through a one-to-one dialogue
- justify *why* a question is being asked
- detect inconsistency in users' answers
- explain *how* a conclusion was reached
- separate knowledge about a problem from the control of the system

Simple ES Architecture

 The University of Auckland

Simple ES Architecture

contains knowledge usually as rules

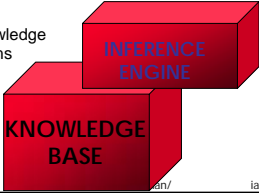

© University of Auckland ian/ ian@cs.auckland.ac.nz

 The University of Auckland

Simple ES Architecture

applies the knowledge to solve problems

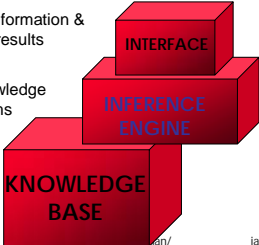

contains knowledge usually as rules

© University of Auckland ian/ ian@cs.auckland.ac.nz

 The University of Auckland

Simple ES Architecture

obtains information & explains results

applies the knowledge to solve problems

contains knowledge usually as rules

© University of Auckland ian/ ian@cs.auckland.ac.nz

 **Simple ES Architecture**

an interface and inference engine can use many different knowledge-bases = **expert system shell**

obtains information & explains results

applies the knowledge to solve problems

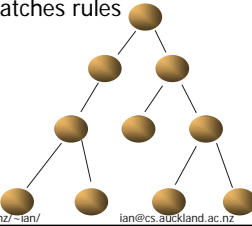

contains knowledge usually as rules

© University of Auckland

 **Rule-Based Systems**

- knowledge can be expressed as rules
- problems can be solved using rules
- rules are stored in the knowledge base
- the inference engine matches rules against data
- and can infer new data

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **Rule-Based Systems**

- Rule-based ES worked!!!
- they were simple
- they were relatively easy to program
- they mimicked how experts worked
- they could explain how they reached a conclusion
- they could be used for commercial benefit
- this was the BREAKTHROUGH AI needed

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **The Hype**

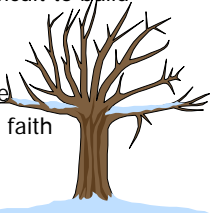

- in the late 70's AI gurus started claiming that ES would become a multi-million dollar business
- ES would operate in every industry
- ES would revolutionise the workplace

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **The AI Winter**

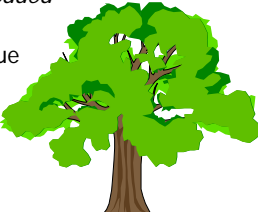

- Large companies invested in AI and caught a chill
- ES were expensive and difficult to build
- ES were hard to maintain
- people didn't like them
- few ES lived up to the hype
- companies lost money and faith

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 **The AI Spring**

- AI techniques have entered the main stream of IT (e.g. business-rules, objects & agents)
- AI has become "*embedded*"
- it is now just another programming technique
- AI makes money

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The AI Spring

- Processor power is now very cheap
- The A-B route finding algorithm in SatNav systems (A* algorithm)
- Was invented in.....

1968

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The AI Spring

- Lots of well known AI techniques are now usable because of cheap processing power
- Called *brute force*
- AI is popular again

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

 The University of Auckland

The AI Spring

- Consider Google <http://labs.google.com/>
- They want to employ people with skills in:
 - artificial intelligence
 - data mining
 - genetic algorithms
 - information retrieval
 - machine learning
 - natural language processing
 - robotics

© University of Auckland www.cs.auckland.ac.nz/~ian/ ian@cs.auckland.ac.nz

The reality is

- AI is working to make machines smarter, autonomous, reactive and adaptive
