

**Errata:**

Helmut Jürgensen: Invariance and Universality of Complexity,  
LNCS 7160, 140–158

In Theorem 2 and its proof the following changes should be made:

- Read (b) as:  $\text{dom}(f)$  is decidable.
- Add to (c):  $\text{dom}(\sigma)$  is decidable.
- Add to (f):  $\text{dom}(\varphi)$  is decidable.
- In line 3 of the proof read:  $f(\sigma(s))$

The first change is not important. The second and third changes are required for the present proof; they might not be needed for a different proof. The fourth change corrects a typo.
