# Definitions

12 August 2003

3

# Classification

- Systematic arrangement in groups
- 'Boxes with labels'
- McDonalds/Airline/Home/Waiheke quality

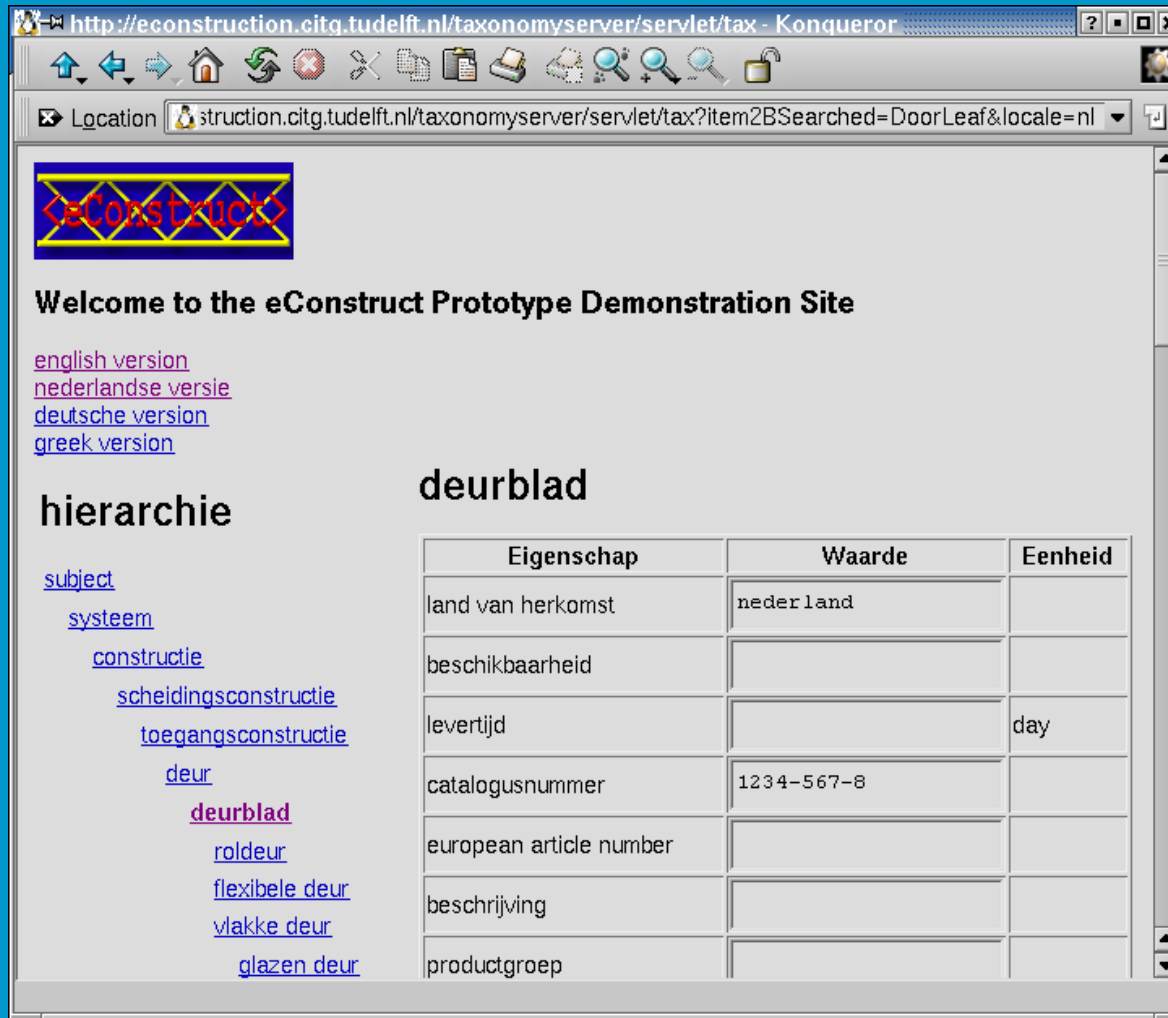

# Taxonomy

- Orderly classification according to natural relationships
- Animal > mammal > canis > gray wolf

# Ontology

- Philosophical: nature of being
- W3C: machine-readable set of definitions
- Example: bcxml/eConstruct

# Bcxml/eConstruct

# Differences

- Classification: boxes with labels
- Taxonomy: natural hierarchy
- Ontology: definitions and relations

# This conference: Classification

- 5 boxes with labels
- 6 building classification systems
- 2 'active'
- 1 research field
- (2 included hierarchy)

# This conference: Taxonomy

- 2 bcxml (it wasn't me!)
- 1 structured hierarchy
- 1 part of ontology definition

# This conference: Ontology

- 3 'fipa' ontologies
- 1 philosophical/original
- 1 topic map
- 1 semantic web quote

# Conclusions

- At this conference, nobody (yet) advertised a classification as an ontology or vice versa.
- With the emerging trend to use ontologies, make sure that you specify what you mean by them. There is much room for misunderstanding.
