Assignment: Find the route from 38 Princes Street to the 5\textsuperscript{th} floor of Computer Science, Building 303S.

Sample solution (valid from 24 January 2017):
1. Have the taxi drop you on Princes St\footnote{From Symonds Street, walk straight through building 301, keep going straight ahead through several doors, and turn left to join these instructions at point 4.} near the sign for #38. There’s a pedestrian crossing with traffic lights nearby.

2. Go up the steps and the turn right into the Science Centre building (the main part of building 303):
3. Now you have choices:
3.1 To find the new location of Computer Science Reception, take the lift (elevator) to level 4, and you are right there.
3.2 For Computer Science offices in building 303, take the lift to the correct floor.
3.3 But then you’ve missed the best bit, which also takes you to Computer Science offices in building 303S:

Walk straight ahead as far as you can (you may have to push students out of the way...). At the end, **turn left** – you will see a blue panel with a “history of computing” display on your left after you turn. Take your time to read the display (ideally, starting at the far end) . In any case, walk through the swing doors...

![Image](image1.jpg)

...and go straight ahead across the next room.

4. After the next doors, **turn right** into an open area and proceed to the far end.

After the sliding doors at the far end, you are in the lobby of Building 303S. Take one of the the lifts on your left to the required floor.

If you have the energy, walk upstairs, admiring the computer history displays in each lobby as you go. Or inspect them on the way down later.

The seminar room, 303S-561, is on floor 5.
