CMSS Seminar, 2011-08-23

2011 Referendum

- ▶ On 26/11/2011 an indicative referendum will be held under the Electoral Referendum Act 2010, with two questions:

2011 Referendum

- ▶ On 26/11/2011 an indicative referendum will be held under the Electoral Referendum Act 2010, with two questions:
 - ▶ Q1: Do you want to keep the current MMP system?

2011 Referendum

- ▶ On 26/11/2011 an indicative referendum will be held under the Electoral Referendum Act 2010, with two questions:
 - ▶ Q1: Do you want to keep the current MMP system?
 - ▶ Q2: If NZ decides to change from MMP, which of the following would you prefer most? First Past the Post (FPP); Preferential Vote (PV); Single Transferable Vote (STV); Supplementary Member (SM).

2011 Referendum

- ▶ On 26/11/2011 an indicative referendum will be held under the Electoral Referendum Act 2010, with two questions:
 - ▶ Q1: Do you want to keep the current MMP system?
 - ▶ Q2: If NZ decides to change from MMP, which of the following would you prefer most? First Past the Post (FPP); Preferential Vote (PV); Single Transferable Vote (STV); Supplementary Member (SM).
- ▶ If Q1 is approved by majority, a review of MMP will be undertaken in 2012, with some minimum terms of reference already specified. If Q1 is not approved, Parliament will consider a possible referendum on a change to the plurality winner of Q2, by 2014.

2011 Referendum

- ▶ On 26/11/2011 an indicative referendum will be held under the Electoral Referendum Act 2010, with two questions:
 - ▶ Q1: Do you want to keep the current MMP system?
 - ▶ Q2: If NZ decides to change from MMP, which of the following would you prefer most? First Past the Post (FPP); Preferential Vote (PV); Single Transferable Vote (STV); Supplementary Member (SM).
- ▶ If Q1 is approved by majority, a review of MMP will be undertaken in 2012, with some minimum terms of reference already specified. If Q1 is not approved, Parliament will consider a possible referendum on a change to the plurality winner of Q2, by 2014.
- ▶ <http://www.referendum.org.nz/> contains much information about the various systems, much of it purely qualitative.

Electoral Referendum Act constraints

- ▶ All 5 systems must be compared assuming a 120-seat Parliament.

Electoral Referendum Act constraints

- ▶ All 5 systems must be compared assuming a 120-seat Parliament.
- ▶ No changes to Maori or South Island electorate seat distribution principles.

Electoral Referendum Act constraints

- ▶ All 5 systems must be compared assuming a 120-seat Parliament.
- ▶ No changes to Maori or South Island electorate seat distribution principles.
- ▶ SM will have 90 electorate and 30 list seats.

Electoral Referendum Act constraints

- ▶ All 5 systems must be compared assuming a 120-seat Parliament.
- ▶ No changes to Maori or South Island electorate seat distribution principles.
- ▶ SM will have 90 electorate and 30 list seats.
- ▶ (not a hard constraint) Under STV, “It is likely the 120 MPs would be divided between 24 and 30 electorates, each with 3 to 7 MPs.”

Motivation

- ▶ The Electoral Commission site makes several claims, for example about likelihood of coalition governments under the various systems.

Motivation

- ▶ The Electoral Commission site makes several claims, for example about likelihood of coalition governments under the various systems.
- ▶ We decided to allow the public to investigate these claims quantitatively.

Motivation

- ▶ The Electoral Commission site makes several claims, for example about likelihood of coalition governments under the various systems.
- ▶ We decided to allow the public to investigate these claims quantitatively.
- ▶ Aim to improve level of public discussion, and avoid what happened in UK this year in their FPP vs PV referendum.

Motivation

- ▶ The Electoral Commission site makes several claims, for example about likelihood of coalition governments under the various systems.
- ▶ We decided to allow the public to investigate these claims quantitatively.
- ▶ Aim to improve level of public discussion, and avoid what happened in UK this year in their FPP vs PV referendum.
- ▶ We chose a web-based calculator in order to maximize the potential audience.

Basic features of the simulator

- ▶ User enters percentage national support levels for each party. The list of parties is pre-selected, and additions and deletions can be done by the user.

Basic features of the simulator

- ▶ User enters percentage national support levels for each party. The list of parties is pre-selected, and additions and deletions can be done by the user.
- ▶ Calculator outputs seat distributions in a 120-seat Parliament for each party under each of the 5 systems.

Basic features of the simulator

- ▶ User enters percentage national support levels for each party. The list of parties is pre-selected, and additions and deletions can be done by the user.
- ▶ Calculator outputs seat distributions in a 120-seat Parliament for each party under each of the 5 systems.
- ▶ For MMP, user can also adjust the threshold (default 5%) and whether threshold is waived for electorate winners (default yes).

Basic features of the simulator

- ▶ User enters percentage national support levels for each party. The list of parties is pre-selected, and additions and deletions can be done by the user.
- ▶ Calculator outputs seat distributions in a 120-seat Parliament for each party under each of the 5 systems.
- ▶ For MMP, user can also adjust the threshold (default 5%) and whether threshold is waived for electorate winners (default yes).
- ▶ Important: no electorate- or candidate-specific information is part of the input.

Challenge: voter behaviour?

- ▶ The most difficult part of simulating elections is deciding what the voters' expressed preferences will be.
 - ▶ possibly insincere
 - ▶ possibly depending on the electoral system

Challenge: voter behaviour?

- ▶ The most difficult part of simulating elections is deciding what the voters' expressed preferences will be.
 - ▶ possibly insincere
 - ▶ possibly depending on the electoral system
- ▶ Our simulator avoids this part by leaving most of it up to the user.

Challenge: downscaling to electorates

- ▶ It is not feasible to ask the user for vote counts at the electorate level.

Challenge: downscaling to electorates

- ▶ It is not feasible to ask the user for vote counts at the electorate level.
- ▶ Instead, we need to downscale the overall party support level to electorate-level results.

Challenge: downscaling to electorates

- ▶ It is not feasible to ask the user for vote counts at the electorate level.
- ▶ Instead, we need to downscale the overall party support level to electorate-level results.
- ▶ The way this done affects the result for all the systems except MMP.

Downscaling party support

- ▶ We assume each party's support is distributed among electorates in the same manner as the 2008 party vote. That is, any variations in support apply uniformly across electorates.

Downscaling party support

- ▶ We assume each party's support is distributed among electorates in the same manner as the 2008 party vote. That is, any variations in support apply uniformly across electorates.
- ▶ There is some evidence that this is reasonable, at least for MMP elections:

<i>National Party</i>	1999	2008
Total party vote	629932	1053398
<i>comprising:</i>		
Mangere	0.45%	0.39%
Mt. Albert	1.08%	1.18%
Nelson	1.50%	1.46%
Clutha-Southland	2.04%	1.92%

Challenge: redistricting

- ▶ We need:
 - ▶ 120 electorates for FPP and PV;
 - ▶ 90 electorates for SM;
 - ▶ 24–30 electorates for STV.

Challenge: redistricting

- ▶ We need:
 - ▶ 120 electorates for FPP and PV;
 - ▶ 90 electorates for SM;
 - ▶ 24–30 electorates for STV.
- ▶ NZ currently has 70 electorates: 63 general and 7 Maori.

Challenge: redistricting

- ▶ We need:
 - ▶ 120 electorates for FPP and PV;
 - ▶ 90 electorates for SM;
 - ▶ 24–30 electorates for STV.
- ▶ NZ currently has 70 electorates: 63 general and 7 Maori.
- ▶ We need to be able to disaggregate the 2008 party vote into our new electorates, for downscaling purposes.

Redistricting

- ▶ Drawing up new electorates is a fairly arbitrary process. We do it only once for each voting system.

Redistricting

- ▶ Drawing up new electorates is a fairly arbitrary process. We do it only once for each voting system.
- ▶ First thought: define each new electorate as a collection of (2008) polling places. (We have party vote data at the polling place level.) But:

Redistricting

- ▶ Drawing up new electorates is a fairly arbitrary process. We do it only once for each voting system.
- ▶ First thought: define each new electorate as a collection of (2008) polling places. (We have party vote data at the polling place level.) But:
 - ▶ It's a lot of work! (5604 polling places, counting multiplicities).

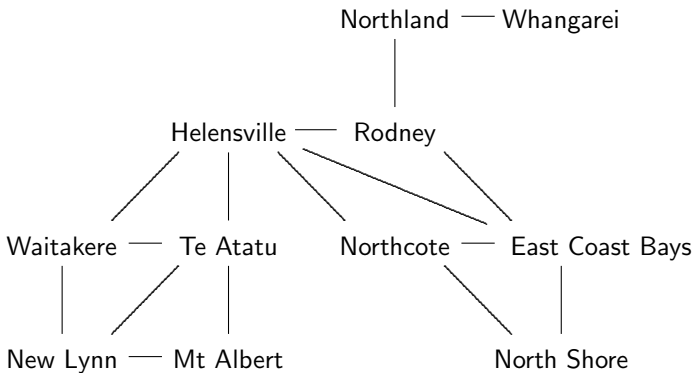

Redistricting

- ▶ Drawing up new electorates is a fairly arbitrary process. We do it only once for each voting system.
- ▶ First thought: define each new electorate as a collection of (2008) polling places. (We have party vote data at the polling place level.) But:
 - ▶ It's a lot of work! (5604 polling places, counting multiplicities).
 - ▶ Ca. 20% of votes are not traceable to a polling place, but only to an electorate. (Advance votes, special votes, overseas votes, etc.)

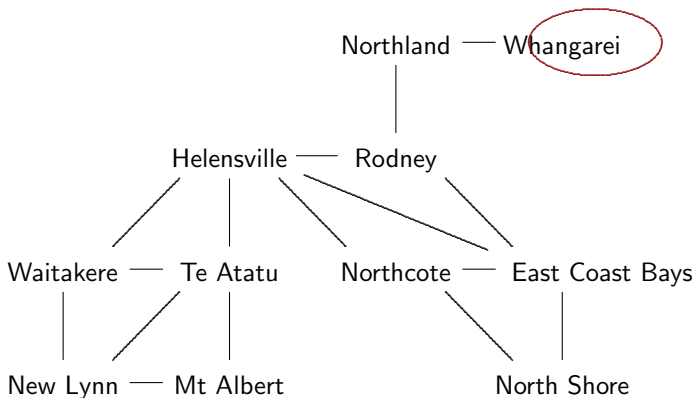

Redistricting

- ▶ Drawing up new electorates is a fairly arbitrary process. We do it only once for each voting system.
- ▶ First thought: define each new electorate as a collection of (2008) polling places. (We have party vote data at the polling place level.) But:
 - ▶ It's a lot of work! (5604 polling places, counting multiplicities).
 - ▶ Ca. 20% of votes are not traceable to a polling place, but only to an electorate. (Advance votes, special votes, overseas votes, etc.)
- ▶ Instead: define each new electorate as a convex combination of contiguous 2008 electorates.

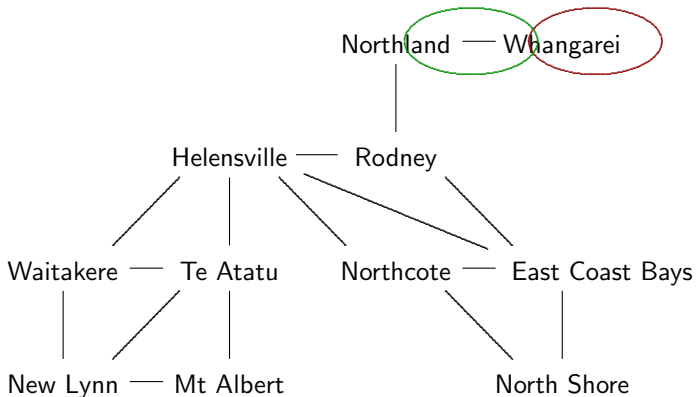

Turn 70 old electorates into 120 new ones:

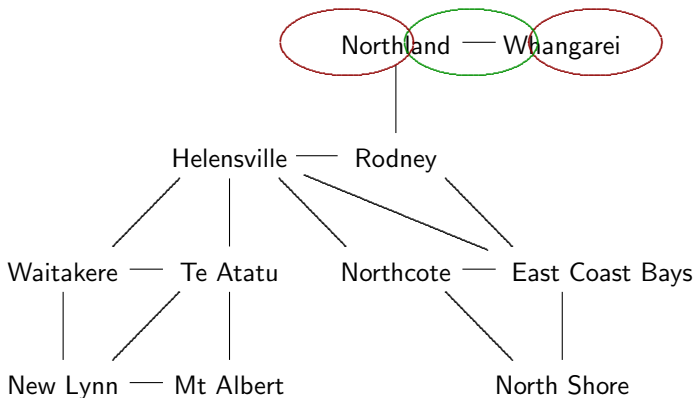

Turn 70 old electorates into 120 new ones:

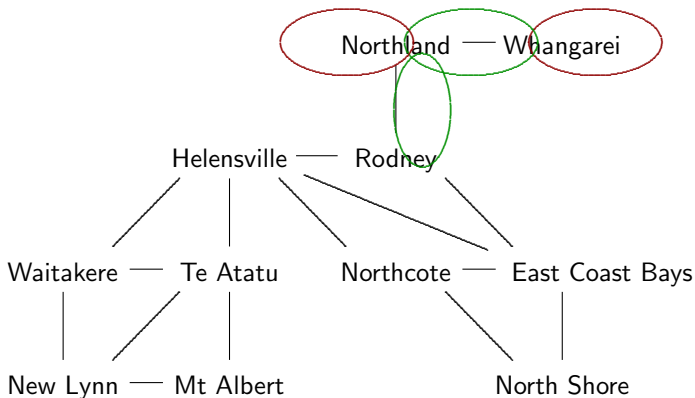

Turn 70 old electorates into 120 new ones:

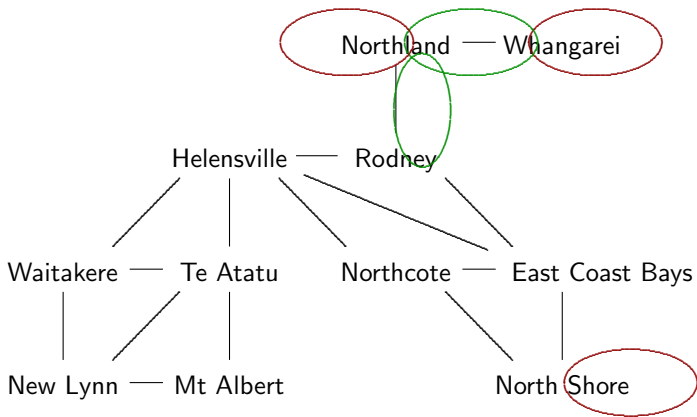

Turn 70 old electorates into 120 new ones:

Turn 70 old electorates into 120 new ones:

Turn 70 old electorates into 120 new ones:

(The new electorates are 7/12 the size of the old ones.)

Challenge: preference-order votes

- ▶ For PV and STV we must infer voter preference orders over candidates, given only the voter's first choice.
- ▶ Asking the user to enter preference orders leads to an infeasible burden of data entry.

Preference orders

- ▶ We use the 2008 NZ Election Study (www.nzes.org) data to infer the frequency of preference orders given the first choice.

Preference orders

- ▶ We use the 2008 NZ Election Study (www.nzes.org) data to infer the frequency of preference orders given the first choice.
- ▶ An NZES survey question asks respondents to rate each party from 0 to 10, with sample size around 3000. We converted these numerical scores into preference orders, breaking ties uniformly.

Preference orders

- ▶ We use the 2008 NZ Election Study (www.nzes.org) data to infer the frequency of preference orders given the first choice.
- ▶ An NZES survey question asks respondents to rate each party from 0 to 10, with sample size around 3000. We converted these numerical scores into preference orders, breaking ties uniformly.
- ▶ We have separate collections of preference orders for the general and Maori rolls.

Challenge: STV

- ▶ The precise form of STV is not specified, and neither is the number of electorates nor the number of winners per electorate. Neither is the method of reallocating votes to other candidates.

STV multi-member electorates

- ▶ We used 30 electorates, with between 3 and 7 seats per electorate.
 - ▶ Rural/provincial areas have 3- or 4-seat electorates.
 - ▶ Two 7-seat electorates (Auckland Central and Wellington).

Counting STV votes

- ▶ There are several methods of counting preferential votes in a multiple-winner election, differing mainly in the way that elected candidates' surpluses are reallocated.

Counting STV votes

- ▶ There are several methods of counting preferential votes in a multiple-winner election, differing mainly in the way that elected candidates' surpluses are reallocated.
- ▶ Meek's method is already used for some local elections in NZ, but not elsewhere.

Counting STV votes

- ▶ There are several methods of counting preferential votes in a multiple-winner election, differing mainly in the way that elected candidates' surpluses are reallocated.
- ▶ Meek's method is already used for some local elections in NZ, but not elsewhere.
- ▶ We use Wright's method.

STV: above/below the line?

- ▶ STV ballot papers usually allow both *below-the-line voting* (a preference order on candidates) and *above-the-line-voting* (a preference order on parties, or vote for a single party).

STV: above/below the line?

- ▶ STV ballot papers usually allow both *below-the-line voting* (a preference order on candidates) and *above-the-line-voting* (a preference order on parties, or vote for a single party).
- ▶ Above-the-line ballots are then converted into candidate preference orders by replacing each party name with a standard list of the party's candidates.

STV: above/below the line?

- ▶ STV ballot papers usually allow both *below-the-line voting* (a preference order on candidates) and *above-the-line-voting* (a preference order on parties, or vote for a single party).
- ▶ Above-the-line ballots are then converted into candidate preference orders by replacing each party name with a standard list of the party's candidates.
- ▶ Typically, most voters vote above the line, as it is simpler.

STV: above/below the line?

- ▶ STV ballot papers usually allow both *below-the-line voting* (a preference order on candidates) and *above-the-line-voting* (a preference order on parties, or vote for a single party).
- ▶ Above-the-line ballots are then converted into candidate preference orders by replacing each party name with a standard list of the party's candidates.
- ▶ Typically, most voters vote above the line, as it is simpler.
- ▶ Since we are not using candidate-specific information, we assume 100% above-the-line voting.

Results: recent poll

One News/Colmar Brunton poll 21/8/2011:

	Vote	MMP	FPP	PV	STV	SM
National	56%	70	101	98	71	95
Labour	30%	37	19	22	45	21
Green	6.0%	7	0	0	1	2
NZF	2.3%	0	0	0	0	1
ACT	1.7%	2	0	0	0	1
Maori	1.4%	2	0	0	3	0
United	0.5%	1	0	0	0	0
Mana	0.9%	1	0	0	0	0
Total seats		120	120	120	120	120

(MMP electorate seats: Maori 2; ACT, United, Mana 1 each.)

Results: 2008 party vote

	Vote	MMP	FPP	PV	STV	SM
National	44.93%	58	82	76	64	75
Labour	33.99%	43	38	44	50	40
Green	6.72%	9	0	0	1	2
NZF	4.07%	0	0	0	0	1
ACT	3.65%	5	0	0	0	1
Maori	2.39%	5	0	0	5	1
United	0.87%	1	0	0	0	0
Progressive	0.91%	1	0	0	0	0
Total seats		122	120	120	120	120

(MMP electorate seats: Maori 5; ACT, United, Progressive 1 each.)

NZES hypothetical FPP vote

The 2008 NZES survey also included a question:

Imagine that the 2008 election had been held under the old first past the post system, and you had only ONE vote for one of the candidates who stood in your electorate. Which party's candidate would you have voted for?

Results: 2008 hypothetical FPP vote

	Vote	FPP	SM
National	44.8%	76	70
Labour	37.6%	37	40
Green	3.5%	0	1
NZF	2.5%	0	1
ACT	0.7%	0	0
Maori	5.0%	7	8
United	0.4%	0	0
Progressive	0.6%	0	0
Total seats		120	120

(For SM, we use the same vote-shares for both votes.)
